

No compromises, ATE!

Only the ATE logo makes a brake pad really safe.

Only the best is good enough for our products and your safety. With superior technologies and services, we have already been making an important contribution to the definition of quality standards for years now. What this means for you: you can rely on the vitally important brake parts of your vehicle!

Showing the way forward in quality and service: Continental's capacity for technological innovation is one pillar of ATE's success. It assures the outstanding quality that is characteristic of ATE spare parts. ATE products are products of OEM quality, guaranteeing the customer high degree of dependability.

Everything that makes braking safer! Braking means more than just an optimum brake pad. ATE always uses the best possible material.

- Where other manufacturers confine themselves to two or three friction materials, ATE currently works with 128 different ones, all developed for specific vehicle models. To achieve the optimum result for specific new application, the friction materials are always improved.
- The principle of drawn pads (hammer-head, a patented ATE development) has proven itself worldwide and is gaining ground on the market.
